Vehicle Hold Control Upgrade Kit
This kit enables the Vehicle Hold Control (VHC) feature, which applies and holds brake pressure when activated and prevents the motorcycle from rolling after the rider has released the brake controls. The primary function of VHC is to prevent the motorcycle from rolling when it is stopped and make it easier to ride away with confidence by minimizing the number of controls needed to pull away smoothly.

- Adds VHC to models equipped with Rider Safety Enhancements by Harley-Davidson (formerly known as RDRS)
- Prevents the motorcycle from rolling when it is stopped, for example at a stop sign on a hill, in stop-and-go traffic on a slope, or on a steep decline out of a parking structure
- The system applies brake pressure from the time the rider has released the brake controls until the rider actuates the throttle and clutch to pull away
- VHC is engaged and disengaged automatically, making it easier to maneuver the bike confidently
- VHC is not intended as a substitute for a parking brake in any situation
